MATHEMATICS (MATH)

Visit the BC Transfer Guide - bctransferguide.ca (https://www.bctransferguide.ca/) - for information about course transfer in B.C.

MATH 1102 3 credits
Precalculus Algebra
Students will develop the computational skills and conceptual understanding of algebra, functions, and graphs necessary to proceed to more advanced mathematics thinking. They will study equations, inequalities, graphs, functions, right angle trigonometry, and applications to problem solving.
Level: UG
Prerequisite(s): Level E1 as defined in the Math Alternatives Table (https://calendar.kpu.ca/course-information/mathematics-alternatives-table/).

MATH 1112 3 credits
Pre-Calculus
Students will develop the conceptual understanding and computation skills that will provide a solid foundation for the study of calculus. They will study functions, their graphs, and their applications to problem solving. In particular they will study, polynomial, rational, exponential, logarithmic, and trigonometric functions. They will develop their ability to use and understand the concepts and language of mathematics.
Level: UG
Prerequisite(s): Level C1 as defined in the Math Alternatives Table (https://calendar.kpu.ca/course-information/mathematics-alternatives-table/)

MATH 1115 3 credits
Statistics I
Students will summarize and display data and perform inferences about proportions, means and standard deviations for one and two populations. Students will summarize and display data, find confidence intervals, and perform hypothesis tests for proportions, means, and standard deviations, for one and two populations, both large and small. They will also perform regression analysis, and determine probabilities.
Level: UG
Prerequisite(s): Level C1 as defined in the Math Alternatives Table (https://calendar.kpu.ca/course-information/mathematics-alternatives-table/)

MATH 1116 3 credits
Mathematical Explorations
Students will study the structure and development of Mathematics from the point of view of the non-mathematician. They will study historical material on the development of classical mathematical ideas as well as the evolution and structure of more recent mathematics, gaining an appreciation of historical and contemporary mathematical thinking. This is an exploratory course in mathematics for students who have minimal mathematical background and whose major interests lie outside of the sciences. This course can be used to partially fulfill the quantitative requirement of the BA degree. It may not be used as a prerequisite for further Mathematics courses.
Level: UG
Prerequisite(s): Level E1 as defined in the Math Alternatives Table (https://calendar.kpu.ca/course-information/mathematics-alternatives-table/)

MATH 1117 3 credits
Environmental Mathematics
Students will study algebraic concepts and methods, making use of them in general and environmental problem solving. They will study basic trigonometry, sequences and series, as well as functions (polynomial, rational, exponential, and logarithmic), and using functions to model data.
Level: UG
Prerequisite(s): Level E1 as defined in the Math Alternatives Table (https://calendar.kpu.ca/course-information/mathematics-alternatives-table/)

MATH 1120 3 credits
Differential Calculus
Students will learn to differentiate algebraic and elementary transcendental functions and to apply these skills to graphing, maxima and minima, related rates, and rectilinear motion. They will be introduced to parametric curves and their differential calculus. Students with credit for MATH 1130 may not take this course for further credit.
Level: UG
Prerequisite(s): Level A1 as defined in the Math Alternatives Table (https://calendar.kpu.ca/course-information/mathematics-alternatives-table/)
Credit Exclusion: MATH 1130
MATH 1130 3 credits
Calculus for Life Sciences I
Students will study differential calculus and its applications to biological sciences. In particular, they will study limits and differentiation of algebraic and elementary transcendental functions, with applications to graphing and optimization. Students with credit for MATH 1120 may not take MATH 1130 for further credit.
Level: UG
Prerequisite(s): Level B1 as defined in the Math Alternatives Table
Credit Exclusion: MATH 1120

MATH 1135 3 credits
Problems and Concepts
Students will develop skills in solving mathematical problems. They will study propositional and quantifier logic and apply this knowledge to solving problems and to elementary set theory, including relations and functions.
Level: UG
Prerequisite(s): Level C1 as defined in the Math Alternatives Table

MATH 1140 3 credits
Calculus I (Business Applications)
Students will study the differentiation of algebraic and elementary transcendental functions and apply these skills to graphing, finding maxima and minima and solving problems in business, economics and social sciences. Students will also study first and second order partial derivatives
Level: UG
Prerequisite(s): Level B1 as defined in the Math Alternatives Table

MATH 1152 3 credits
Matrix Algebra for Engineers
Students will solve systems of linear equations, and study the algebra of matrices, determinants, invertibility, eigenvalues and eigenvectors, diagonalizability and systems of linear Ordinary Differential Equations (ODE’s). They will study the geometry of Euclidean space, dot and cross products, the arithmetic of complex numbers, exponentials of complex numbers, and the complex plane. Students will use a Computer Algebra System to solve problems in matrix algebra.
Level: UG
Prerequisite(s): One of: MATH 1120, MATH 1130 (C+), MATH 1140 (B-), MATH 1230 or MATH 1240

MATH 1190 4 credits
Mathematics for Elementary School Teachers
Students will study the theory and applications of arithmetic, geometry and data analysis (statistics). This course is designed for students planning a career as an elementary school teacher.
Level: UG
Prerequisite(s): Level E1 as defined in the Math Alternatives Table (https://calendar.kpu.ca/course-information/mathematics-alternatives-table/), and 9 credits from courses at the 1100 level or higher.

MATH 1216 3 credits
Mathematics in the Visual Arts
Students will study the mathematical principles, methods, and structures used in the visual arts. They will study Euclidean and non-Euclidean geometry, symmetry, tilings in the plane, fractal geometry, and perspective. Note: this course may not be used as a prerequisite for further mathematics courses.
Level: UG
Prerequisite(s): Level E1 as defined in the Math Alternatives Table (https://calendar.kpu.ca/course-information/mathematics-alternatives-table/).

MATH 1220 3 credits
Integral Calculus
Students will learn to integrate algebraic and elementary transcendental functions and to apply these skills to appropriate problems. In addition, they will learn the fundamental theorem of calculus, the integral calculus of parametric curves, Taylor polynomials, sequences and series and simple differential equations.
Level: UG
Prerequisite(s): MATH 1120, MATH 1130 (C+), or MATH 1140 (B-)

MATH 1230 3 credits
Calculus for Life Sciences II
Students will study integral calculus and its applications to biological sciences. In particular, they will study the techniques of integration, including integration by parts and partial fractions; differential equations, including systems of linear differential equations; and mathematical models in the biological sciences.
Level: UG
Prerequisite(s): MATH 1120, MATH 1130, or MATH 1140 (C+).
MATH 2232 3 credits
Linear Algebra
Students will study systems of linear equations, matrices, determinants, eigenvalues and eigenvectors, dot products, cross products, the Gram-Schmidt process, vector and scalar projections, lines and planes in Euclidean space. Students will also study vector spaces, including general vector spaces and subspaces, linear independence, spanning sets, bases, and linear transformations. Students will write simple proofs.
Level: UG
Prerequisite(s): One of the following: MATH 1120 (C), MATH 1130 (C+), MATH 1140 (B-), MATH 1220 (C), MATH 1230 (C) or MATH 1240 (C).

MATH 2315 3 credits
Probability and Statistics
Students will study introductory probability and statistics using a background of calculus. They will study concepts including randomness, probability, probability distributions for discrete and continuous random variables, descriptive statistics, multivariate distributions, laws of expectation, functions of random variables, statistical inference, and hypothesis testing. Distributions studied will include binomial, normal, geometric, hypergeometric, exponential and Poisson distributions.
Level: UG
Prerequisite(s): One of MATH 1220, MATH 1230, MATH 1240

MATH 2321 3 credits
Multivariate Calculus (Calculus III)
Students will study the calculus of three dimensions. They will study vectors, lines, planes, cylinders and surfaces; vector functions, space curves and motion in space; and differential and integral calculus of functions of several variables. Students will study optimization, including Lagrange Multipliers. They will study rectangular, polar, cylindrical and spherical coordinate systems. Students will study applied problems and use of a computer algebra system.
Level: UG
Prerequisite(s): One of MATH 1220 (C), MATH 1230 (C+), MATH 1240 (B-)

MATH 2335 3 credits
Statistics for Life Sciences
Students will learn statistical techniques and their application to life sciences. They will study descriptive statistics, elementary probability, probability distributions, in particular, the binomial, normal, t and chi-square distributions, confidence intervals and hypothesis testing for population means, and proportions, as well as for differences in population means and proportions. Students will also study linear regression, and the chi-square goodness-of-fit test. Students with credit for MATH 2341 may not take MATH 2335 for further credit.
Level: UG
Prerequisite(s): One of MATH 1120 (C), MATH 1130 (C), MATH 1140 (C)
Credit Exclusion: MATH 2341

MATH 2341 4 credits
Introduction to Statistics for Business
Students will learn statistical techniques and their application to business and economics. They will study descriptive statistics, elementary probability, random variables, sampling distributions, linear regression, correlation, estimation and hypothesis testing. They will also learn how to apply statistical software to descriptive and inferential statistics. Distributions studied will include binomial, normal, t- and chi-square distributions. Students with credit for MATH 2335 may not take MATH 2341 for further credit.
Level: UG
Prerequisite(s): Level C1 as defined in the Math Alternatives Table (https://calendar.kpu.ca/course-information/mathematics-alternatives-table/), and 9 credits from courses at the 1100 level or higher.
Credit Exclusion: MATH 2335

MATH 2410 3 credits
Discrete Mathematics
Students will study the basic techniques of discrete mathematics, including methods of logic, formal reasoning, induction, recursion, counting, functions and relations, modular arithmetic, and structures such as graphs and trees.
Level: UG
Prerequisite(s): CPSC 1103 and one of the following: MATH 1120, MATH 1130 or MATH 1140
MATH 2721 3 credits
Complex Numbers and Linear Algebra
Students will use row reduction to solve systems of linear equations. They will study the algorithms for matrix multiplication, inversion, transposition, determinants, eigenvalues and eigenvectors, and diagonalization, and apply these skills to practical problems. They will study the geometry of Euclidean space. They will study the arithmetic, exponents and logarithms of complex numbers, and use them to solve a variety of applied problems in physics and engineering. Students will use a Computer Algebra System to solve problems in matrix algebra.
Level: UG
Prerequisite(s): MATH 1220 or MATH 1230

MATH 2821 3 credits
Multivariate and Vector Calculus
Students will study the principles of multivariate and vector calculus. They will study surfaces, partial derivatives, gradients, and multiple integrals in polar, cylindrical, and spherical coordinate systems. Students will also study derivatives of vector-valued functions, differential operators, line integrals and Green's theorem, surface integrals including the divergence and Stokes' theorems, conservative fields, and potentials, with an emphasis on applications.
Level: UG
Prerequisite(s): (MATH 1220 or MATH 1230) and (MATH 2721 or MATH 1152)

MATH 3120 3 credits
Introduction to Applied Mathematics
Students will learn a variety of techniques and methods useful in applied mathematics. They will study the gamma function and hyperbolic trigonometric functions. Students will investigate power series and Frobenius series methods for solving ordinary differential equations, including selected important differential equations in mathematical physics. Furthermore, they will study Sturm-Liouville problems and orthogonal series. A brief introduction to partial differential equations and separation of variables will be provided.
Level: UG
Prerequisite(s): (MATH 1220, MATH 1230 (C+) or MATH 1240 (B-), or MATH 2232); and (c) one of MATH 1115, 2315, 2335, or 2341
Prerequisite(s): Both (a) MATH 1220, MATH 1230 (C+), or MATH 1240 (B-).

MATH 3150 3 credits
The Structure of Mathematics
Students will study the underlying structure of mathematics, including mathematical symbolism, introduction to set theory and introduction to logic. They will develop an understanding of methods of proof and an appreciation for the structure of mathematics.
Level: UG
Prerequisite(s): MATH 2232 (C) and one of: MATH 1220 (C), MATH 1230 (C+), or MATH 1240 (B-).

MATH 3160 3 credits
Group Theory
Students will study the fundamental concepts and results of group theory. They will study groups and subgroups, Lagrange's theorem, homomorphisms, normal subgroups, factor groups, Cauchy's theorem and direct products.
Level: UG
Prerequisite(s): Both (a) MATH 1220, MATH 1230 (C+) or MATH 1240 (B-), and (b) MATH 2232.

MATH 3170 3 credits
Complex Variables
Students will study complex numbers, functions of complex numbers, analytic functions, Cauchy-Riemann equations, elementary functions, contour integration, Cauchy's integral theorem and formula, series representations of analytic functions, poles and residues, with applications to physics and engineering.
Level: UG
Prerequisite(s): Both (a) MATH 1115, MATH 2232 or MATH 2721, and (b) MATH 2321 or MATH 2821
MATH 3250 3 credits
Geometry
Students will study Euclidean and other geometries, and construct geometrical proofs and objects. They will apply geometric concepts and reasoning to practical problems.
Level: UG
Prerequisite(s): MATH 2232 (C) and one of the following: MATH 1220 (C), 1230 (C+), or 1240 (B-)

MATH 3315 3 credits
Applied Inferential Statistics
Students will be introduced to the standard techniques of multiple regression analysis. They will study simple regression, ANOVA, multivariable distributions, analysis of residuals and general linear models and their role in research.
Level: UG
Prerequisite(s): 15 credits from courses at the 1100 level or higher and one of: MATH 1115 , MATH 2335 , MATH 2341 , or MATH 2315.

MATH 3322 3 credits
Vector Calculus (Calculus IV)
Students will study the calculus of vector valued functions and vector fields. They will study derivatives of vector valued functions, the chain rule, Jacobians and invertibility, differential operators, line integrals and Green's theorem, surface integrals including divergence and Stokes' theorems, path independence and conservative fields and potentials.
Level: UG
Prerequisite(s): MATH 2321 (C) and one of: MATH 2322 (C), MATH 1152 (C+)

MATH 3421 3 credits
Ordinary Differential Equations
Students will study solving first order differential equations, second order linear differential equations with constant coefficients, Laplace transforms, systems of linear differential equations, and applications of differential equations. Students will also be using a computer algebra system.
Level: UG
Prerequisite(s): Both (a) MATH 1152 or 2232, and (b) MATH 1220, MATH 1230 (C+) or MATH 1240 (B-)

MATH 3431 3 credits
Partial Differential Equations
Students will study the wave equation, the heat equation, Laplace's equation, and other classical equations of mathematical physics. They will study characteristic curves, solutions to the heat and wave equations on the infinite, semi-infinite and finite line, Fourier series, Laplace transforms, and numerical solutions using finite differences.
Level: UG
Prerequisite(s): MATH 3421

MATH 3450 3 credits
History of Mathematics
Students will study the aspects of the history of mathematics from its earliest beginnings in solving concrete problems through the development of abstraction and rigour in the nineteenth and early twentieth centuries. They will examine and analyze both the growth of ideas and the context in which they developed, with emphasis on the mathematics taught in secondary school and the first two years of university study.
Level: UG
Prerequisite(s): MATH 2232 (C) and one of: MATH 1220 (C), MATH 1230 (C+), MATH 1240 (B-)

MATH 4130 3 credits
Theory of Mathematics Education
Students will explore theories and trends in mathematics education. They will survey significant historical, philosophical, psychological and societal factors influencing the development of mathematics education as a field of inquiry, and will critically examine and discuss current theories and research in mathematics instruction. They will investigate problem solving, reasoning and communication in mathematics.
Level: UG
Prerequisite(s): One of: MATH 2232 (C), MATH 2321 (C), MATH 2331 (C), MATH 2410 (C). Note: EDUC 2220 (C) is recommended.
Attributes: ASTR (https://calendar.kpu.ca/courses-az/#astrtext), SCIH (https://calendar.kpu.ca/courses-az/#courseattributestext)

MATH 4150 3 credits
Number Theory
Students will study the following topics: divisibility, properties of types of integer numbers, primes, congruences, Diophantine equations, primitive roots, and quadratic residues.
Level: UG
Prerequisite(s): Both (a) MATH 1220, MATH 1230 (C+) or MATH 1240 (B-), and (b) MATH 2232.
MATH 4190 3 credits
Introduction to Point-Set Topology
Students will study the fundamental concepts and results of point-set (general) topology. They will study sets, relations and functions, order, cardinality, Axiom of Choice, topological spaces, bases and subbases, continuity and homeomorphisms, metric spaces, countability and compactness.
Level: UG
Prerequisite(s): MATH 2232 (C) and MATH 2331 (C) and one of the following: MATH 1220 (C), 1230 (C+), or 1240 (B-)
Attributes: ASTR (https://calendar.kpu.ca/courses-az/#astrtext), SCIH (https://calendar.kpu.ca/courses-az/#courseattributestext)

MATH 4210 3 credits
Biomathematics
Students will study mathematical modelling and data analysis for biological systems. They will focus on developing and analysing dynamic models of biological systems and processes. They will study the mathematics of population dynamics, models of metabolic processes, genomics and epidemiology.
Level: UG
Prerequisite(s): MATH 2315 and MATH 3421.

MATH 4220 3 credits
Numerical Methods
Students will study the theory and practical application of numerical methods for approximating solutions of linear and nonlinear problems. They will study solutions to nonlinear equations, interpolation and splines, numerical differentiation and integration, solution of initial and boundary value problems, and error sources and analysis. Students are required to have a portable computer able to run software as designated by the instructor.
Level: UG
Prerequisite(s): MATH 2321; and one of: MATH 2232, MATH 1152, MATH 2721; and one of: CPSC 1204, MATH 3140

MATH 4240 3 credits
Mathematical Modelling
Students will study the formation, analysis, and interpretation of mathematical models drawn from the physical, biological, economic, and social sciences. They will study continuous and discrete, deterministic and stochastic models. Students will use techniques such as differential and difference equations, matrix analysis, optimization, simple stochastic processes, and numerical methods. NOTE: Students are required to have a portable computer able to run software as designated by the instructor.
Level: UG
Prerequisite(s): MATH 2321 and MATH 2315 and MATH 3421 and one of: CPSC 1204, MATH 3140

MATH 4250 3 credits
Special Topics in Mathematics
Students will study a particular advanced topic in mathematics, depending upon student interest and faculty availability. Note: Students may take this course multiple times for further credit on different topics.
Level: UG
Prerequisite(s): MATH 2232 (C) and one of: MATH 1220 (C), MATH 1230 (C+), MATH 1240 (B-)

MATH 4350 3 credits
Senior Project
Students will complete a substantial research project under the supervision of an instructor. They will identify relevant sources of information, in the form of a literature search and review, and submit a final paper investigating a research question. Students will present their project and research results.
Level: UG
Prerequisite(s): 9 MATH credits at the 3000-level or higher
