BACHELOR OF APPLIED SCIENCE IN SUSTAINABLE AGRICULTURE

At a Glance

Faculty

www.kpu.ca/science (http://www.kpu.ca/science/)

Area of Study:

www.kpu.ca/science/agriculture (http://www.kpu.ca/science/ agriculture/)

Academic Level:

Undergraduate

Credential Granted:

Baccalaureate Degree

Start Date:

Fall (September)

Spring (January)

Summer (May)

Intake Type:

• Open

Minimum Credits Required: 123

Curriculum Effective Date:

01-Sep-2015

The Bachelor of Applied Science in Sustainable Agriculture degree is unique to North America and is distinguished from other agriculture degree programs by providing a broad scope of study related to sustainable food production as an integral and fundamentally critical element of sustainable human existence. Through a distinctive and exceptional combination of classroom and farm-based learning, the program offers a comprehensive perspective on:

- · The science of agro-ecosystem design and stewardship;
- · Innovative and ecologically sound crop production methods;
- Sustainable farm business management; and,
- The economic, social, and environmental challenges facing our food system

Learning Outcomes

The curriculum is designed in recognition of the need for both practical and academic training within the new powerful movement in sustainable agriculture. Students will be immersed in a setting which fosters experiential learning and exploring personal interests and inclination. During our four year Bachelor degree program, students will work to realize three major learning outcomes:

- The ability to grow fruit and vegetable crops within a sustainable ecological context. A full spectrum of experiential field-based agricultural courses are offered in Year 3 which, by necessity, follows a complete crop cycle beginning in the spring and extending through summer into the fall. These applied courses function as a mechanism to bring the theoretical concepts and principles of sustainable agroecosystem design, function and management to practical realization.
- Develop the business, sales and marketing skills necessary to manage a sustainable agricultural farming business. The development of these skills is facilitated by the inclusion of a broad base of foundational courses supplemented by a multidisciplinary business management course in Year Four.
- Develop practical, problem solving and research skills as well as an understanding of government, economic and business environments and policies needed to address issues of and advance sustainable agrifood systems, as related to employment in government, non-government organizations and the private sector.

Who Studies Sustainable Agriculture?

Individuals interested in gaining a practical understanding of sustainably growing food for their communities as well as those who wish to see this type of local-regional agriculture and food system integrated fully into society. This program will appeal to students who recognize that environmental stewardship and community involvement are critical to our food system and who wish to be part of a new approach to agriculture. Students looking for creative, hands-on work on farms and in the community will thrive in this program.

Career Opportunities

Sustainable, local food production is a rapidly developing component of sustainable community/ regional planning and development is on the minds of the public and governments alike. Program graduates will be sought after in areas as diverse as planning, resource management, politics, government, non-government organizations, related business, and production agriculture.

Requirements Admission Requirements

The Faculty's Admission Requirements, which consist of KPU's undergraduate English Proficiency Requirement (https://calendar.kpu.ca/admissions/english-proficiency-requirements/), apply to this program.

Declaration Requirements

Students intending to graduate with this Faculty of Science degree must declare the credential by the time they complete 60 credits of undergraduate coursework. At the time of declaration, the student must satisfy all of the following requirements:

- · In good academic standing with the University
- Completion of a minimum of 24 credits of undergraduate coursework, including the following:
 - · 3 credits of ENGL at the 1100 level or higher

Curricular Requirements

The Bachelor of Applied Science in Sustainable Agriculture consists of 123 credits of course work, including 27 credits of electives. A minimum of 15 credits of electives must be chosen from subject areas other than AGRI, including at least 3 credits at the 3000-level or above.

Year 1

Note: Courses in Year One follow the agricultural season and progression of agricultural

agricultural practices	h.	

¹ Students who need to upgrade in order to meet the prerequisites for ENVI 1106 or STAT 1115, may use MATH 1102 or MATH 1117 as an elective.

² Students must have 3 credits of courses identified as Writing Intensive to graduate.

Credential Awarded

Credits

Upon successful completion of this program, students are eligible to receive a **Bachelor of Applied Science in Sustainable Agriculture**.
